

Investment Philosophy

We consider drawdown the only relevant measure of risk and its avoidance is the cornerstone of our investment process. Our process relies on various momentum techniques aimed at identifying, and avoiding underperforming assets. We are prepared to be fully invested in cash. In addition, we believe that markets and the decision-making process of investors in markets, is generally inefficient. We build portfolios that are resilient in the face of market declines and that compound positive returns stably over the course of the market cycle.

Performance Summary

The MONOGRAM Strategy returned -1.7% net in the month of April and -2% YTD.

EAFE stocks did comparatively better falling -1.7% (GBP -2.5%) as did Japan -1.2%. (GBP -3.2%). There was no safe harbour as the downturn stormed across the fixed income market with US Aggregate bonds down -4% (GBP+0.5%) and gold -2% (GBP +2.7%). A bevy of headwinds are dragging down stocks, including inflation, supply-chain woes, growth concerns, and war in Ukraine.

Financial conditions, a cross-asset measure of market health using a weighted average of riskless interest rates, exchange rates, equity valuations, and credit spreads, have tightened over the month ahead of the highly anticipated 50bp interest rate hike from the Fed in early May. All signs point to an official end to QE, as the market no longer believes the Fed will ease every market stress. As of the end of April, the market is pricing in 50bp hikes over the next three Fed meetings.

⁴ Fund Identifiers (ISIN); Ruffer: GB00B81SXL02, Invesco: GB00B8CHD613, Carmignac: LP68245753, St Life Aberdeen: GB00B2850218, Aviva: GB00BMJ6DT26, AQR: LP68140783, VT GTR: GB00B4VWT948.

The GBP MonograM Model dropped 1.7% in April, after being almost flat on the year so far. Two big forces are at play, firstly our high liquidity, but secondly and more dominant, a strong dollar, which is eclipsing many market moves.

Markets have finally understood the Federal Reserve may not want to raise rates but has no choice. Although as sequentially other major currencies understand the same, and start to act, this may well reverse.

For a sterling investor the model is exposed to the dollar through equities, gold and cash (which is held in dollars) which has clearly been a good combination. Nor are the model signals suggesting any short-term challenge to this position, although markets are highly volatile.

There is little further we can say, it is all about the dollar. Although it can be argued that is not the direct target of our process, the nature of momentum is that it exists without it always being exactly clear why.

It is striking how in our peer group of absolute return type products, that Invesco, Standard Life and Carmignac have lost money, in *every time period* in our table, from one to fifteen months. While over twelve months MonograM continues to reign supreme, despite the undoubted sophistication of the competitors.

The exact comparator funds are noted on the front page, and within a type of funds strategies (and risk) will typically vary considerably.

The model weights are unchanged on the month.

Product Information

The product is offered as a managed account, through two service providers: this is not an exhaustive list, but both feature low rates.

- Archer Daniel Midland (ADM), for accounts over £100,000 in either Dollar or Sterling variants.
- Jarvis Investment Management(JIM), for accounts under £100,000 in Sterling only.

MCM will manage the account, although it is **held in the investor's own name**. The management fee is 0.5% plus VAT charged quarterly. There are no other charges except for custody with ADM, who charge 1/100 of one per cent per month, (one basis point) on Exchange Traded Funds (ETFs). No stamp duty is charged on ETFs. Dealing charges are a flat £9.50 per trade (JIM), and \$35 for ADM. The model is a low trading one. ADM reports to you daily. JIM reports quarterly. Real time access to your account is offered at no extra charge.

Please remember that the model has policies on the introduction of funds to the market and in cases the movement between asset classes designed to avoid dislocations at the month end, or to avoid buying into a peak. Your own account (and each account is individual) may reflect these changes, although they should be of limited duration.

Investment and Risk Profile

By investing in an account which invests within the Global Total Return category, you are likely to be looking for an investment which aims to produce a positive return, with capital preservation and low volatility. You are however willing to accept, that your investments will fall and rise and you could get back less than you invested and also that when equity markets do well, this account may not deliver the same returns in the short term.

Risk Warnings and other important information. Issued by Monogram Capital Management Limited, ("MCM") MCM is authorised and regulated by the Financial Conduct Authority number **820474**.
